

L2.8 Antiderivatives

Recall: L2.7 Newton's Method

Name _____

Solo – 9 minutes

1. Let $f(x) = x^3 + x - 3$ and start from $x_1 = 1$. Carry out one iteration of Newton's method to find x_2 .
2. In that iteration, x_2 is the x -intercept of a particular line. **Which line?** One sentence.
3. Three students are each asked for a function whose derivative is $2x$. One writes x^2 , one writes $x^2 + 7$, and one writes $x^2 - 1$.
Who is right? One sentence.
