

L4.1b Functions of y

Recall: areas between curves

Name _____

Solo – 9 minutes

1. Find where $y = x^2$ and $y = 2x + 3$ meet, then **write** the integral that gives the area enclosed between them. Do not evaluate it.

2. $y = x^3$ and $y = x$ cross once inside $[0, 2]$. Write the set-up for the area between them on $[0, 2]$. Do not evaluate it.

3. The shaded region is bounded by $y = \sqrt{x}$, $y = x - 2$ and the x -axis. Write the integral or integrals **in** x that give its area. **How many did it take, and why?**
