

L1.3 Continuity

Recall: L1.2 Limits

Name _____

Solo – 9 minutes

1. Evaluate. For each one, say **first** what $f(a)$ came back as, then what the chart told you to do.

$$(a) \lim_{x \rightarrow 2} \frac{x^2 + x - 6}{x - 2} \quad (b) \lim_{x \rightarrow 1} \frac{3}{(x - 1)^2} \quad (c) \lim_{x \rightarrow 3} \frac{x^2 + 1}{x + 2}$$

For (b), write LHL and RHL separately before you commit to an answer.

2. From the graph, find each value. If it does not exist, say so.

$$(a) \lim_{x \rightarrow -1^-} f(x) \quad (b) \lim_{x \rightarrow -1^+} f(x) \quad (c) \lim_{x \rightarrow -1} f(x) \quad (d) f(-1) \quad (e) \lim_{x \rightarrow 1} f(x) \quad (f) f(1)$$

3. We have been evaluating limits this whole time by trying $f(a)$ first.

When is it actually OK to just plug in?
