L4.2b Washers

Work in your group. Check your answers against the Quarto tonight.

Washers

---

1. The region $\mathcal{R}$ enclosed by $y = 2x$ and $y = x^2$ is rotated about the x-axis.

(a) Find where the curves meet.

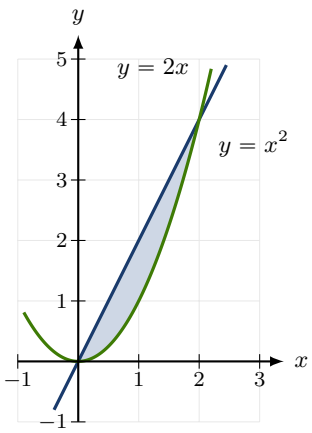

(b) Test a point to decide which curve is the outer edge R and which is the inner edge r.

(c) Write $A(x)$.

(d) Find the volume of the solid.

Rotating about other lines

2. The region $\mathcal{R}$ enclosed by $y = 2x$ and $y = x^2$ is rotated about the line $y = 4$.

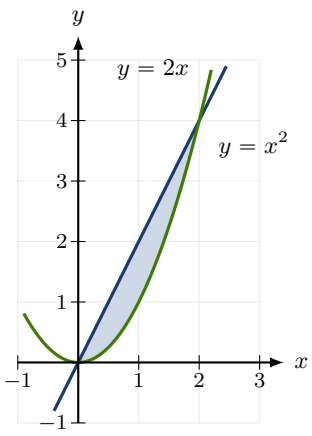

(a) Draw the axis of rotation and one strip perpendicular to it. Label R and r.

(b) Write $R(x)$, $r(x)$ and $A(x)$.

(c) Find the volume of the solid.

3. The region $\mathcal{R}$ enclosed by $y = 2x$ and $y = x^2$ is rotated about the line $y = -1$.

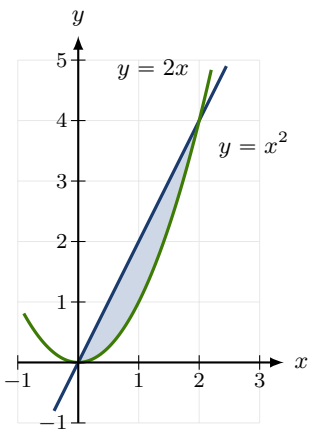

(a) Draw the axis of rotation and one strip perpendicular to it. Label R and r.

(b) Write $R(x)$, $r(x)$ and $A(x)$.

(c) Find the volume of the solid.

4. The region $\mathcal{R}$ enclosed by $y = 2x$ and $y = x^2$ is rotated about the line $x = 2$.

(a) Solve each curve for x, and find the limits of integration.

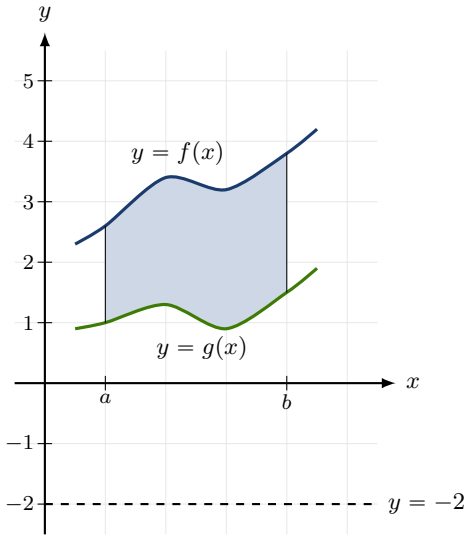

(b) Draw the axis of rotation and one strip perpendicular to it. Test a value of y to decide which curve is on the right. Label R and r.

(c) Write $R(y)$, $r(y)$ and $A(y)$.

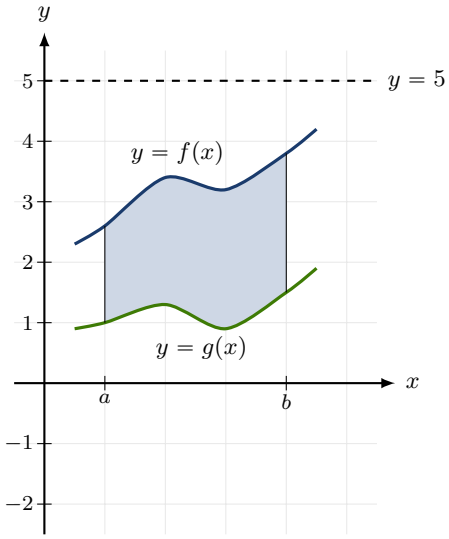

(d) Find the volume of the solid.

5. The region between $y = f(x)$ and $y = g(x)$ on $[a, b]$ is rotated about the dashed line. On each graph, draw one strip, label R and r, and write $A(x)$ in terms of f and g.

(a)

(b)

(a) $A(x) =$

(b) $A(x) =$
