

L4.1c Areas Along y

Recall: graphing functions of y

Name _____

Solo – 9 minutes

1. Sketch $x = y^2 - 4y + 3$. Mark its zeros, its vertex and its x -intercept.

2. Write each curve as x in terms of y : (a) $y = \sqrt{x}$ (b) $y = x - 2$

3. The shaded region is bounded by $y = \sqrt{x}$, $y = x - 2$ and the x -axis. Write the integral or integrals **in x** that give its area. **How many did it take, and why?**
